**Purpose of Contact:** Backfill of 700-3/B701 hot spot

### Discussion

Contaminated soil was removed from the area around CF46-019, where soils above action levels were identified. The excavation is approximately 6 feet long (east/west), 8 feet wide (north/south) and 3 feet deep. Field instrumentation did not identify any areas with elevated activity. Samples were collected from all four sides and the base of the excavation and sent to the field screening lab. All results were well below action levels. All samples were sent off-site for confirmation alpha spec analysis. Based on these results, it was agreed that the excavation could be backfilled.

The B701 area is raised above the surrounding grade and will require regrading. Therefore, the excavation will be backfilled with the soil in the immediate area.
